Biannual EM&A Summary Report on Ecology for
November 2018 – April 2019 (Rev A)

June 2019

Pursuant to Condition 4.6 of Environmental Permit No. EP-311/2008/E, this Biannual EM&A Report on ecological aspects for November 2018 to April 2019 has been reviewed, certified by Environmental Team Leader (ETL) and verified by the Independent Environmental Checker (IEC).

1 Introduction

1.1 Background

In March 2005, the Project Proponent, Profit Point Enterprises Limited, acquired the development site in Yuen Long at Wo Shang Wai. An Environmental Impact Assessment (EIA) was then carried out under the EIA Ordinance (EIAO), and the Environmental Permit (EP-311/2008) for construction of the comprehensive development in Wo Shang Wai was first granted by EPD on 9 September 2008 and has been subsequently varied, with the current version (EP-311/2008/E) issued by EPD on 19 December 2017.

The Project involves the residential development and associated infrastructure and wetland restoration area and linear landscape area. The construction works under the Environmental Permit commenced on 12 May 2010. The site formation construction works of the Wetland Restoration Area (hereafter WRA) were completed on 15 November 2010, and the WRA was established by October 2012, within 30 months from the commencement of construction as stipulated in the EP. This indicated that planting works as scheduled in the approved Wetland Restoration and Creation Scheme (WRCS; November 2009) was completed, except along the western and southern boundary where the planting is affected by the existing site boundary and noise barrier, and for which a Variation to Environmental Permit (EP-311/2008/C) to defer planting at the location was approved. The current valid EP (EP-311/2008/E) includes specific mitigation measures to minimise certain identified noise impacts during the operation phase of the Project.

Mott MacDonald Hong Kong Ltd. ("MMHK") has been commissioned by the Contractor, Heng Shung Construction Co. Ltd., to undertake the Environmental Team (ET) services to carry out environmental monitoring and audit (EM&A) for both pre-construction and construction phases of the Proposed Comprehensive Development at Wo Shang Wai, Yuen Long. From August 2016, the Project Proponent, Profit Point Enterprises Limited, commissioned MMHK to continue the ET services.

According to the EP Condition 4.6, the EM&A results on ecological aspects during the construction phase should be reported to the EIA Subcommittee of the Advisory Council on the Environment (ACE), EPD and Agriculture, Fisheries and Conservation Department (AFCD) on a biannual basis. This is the 18th Biannual EM&A report and it summarises the findings on EM&A results of ecological aspects during the period from 1 November 2018 to 30 April 2019. This report documents surveys and management activities conducted in the Survey Area and WRA from 1 November 2018 to 30 April 2019, which is based on ecological surveys and advices on management which were undertaken by the appointed Non-Government Organisations (Green Power / Eco-Education & Resources Centre) during the reporting period.

1.2 Survey Area

Surveys were conducted within 500m of the Project area. The WRA was surveyed since early September 2010. The survey area and transect are provided in **Figure 1.1**.

1.3 EM&A Requirement on Ecological Impact

The EM&A programme requires environmental monitoring of ecology as specified in the approved EM&A Manual. A summary of ecological impact EM&A requirements is presented in **Table 1.1:**

Table 1.1: Summary of Ecological Impact EM&A Requirements

Descriptions	Locations	Frequencies
Birds	Within the Project Area and Assessment Area of 500m	Weekly
Dragonflies and Butterflies	Within the Project Area and Assessment Area of 500m	Once per month during Mar and Sep to Nov, and twice per month during Apr to Aug
Herpetofauna	Within the Project Area and Assessment Area of 500m	Day-time: Once per month during Apr to Nov Night-time: Once per month during Mar to Aug
Water quality of Wetland Restoration Area (WRA)	WRA	After filling of WRA with water, monthly for in situ water quality and every six months (end of wet season and end of dry season) for laboratory testing
Site Inspections	Within the Project Area and Assessment Area of 500m	Weekly

2 Ecological Monitoring

2.1 Ecological Monitoring

In accordance with the EM&A requirements, monitoring of birds, dragonflies and butterflies, and herpetofauna were carried out during the reporting period. In addition, monitoring of mammals was also conducted concurrently with other surveys and the results were reported although it is not required by the EM&A Manual. The dates of surveys are summarised in **Appendix A**.

2.2 Monitoring of Birds

Monitoring was undertaken following the survey methodology in the EM&A Manual (Table 7-1). Since September 2010, monitoring included the newly formed cells to monitor faunal usage of this area. All bird species of conservation importance and/or wetland dependent were identified and enumerated. Flying birds were not recorded unless they were foraging and/or associated with the habitat (such as swifts). Further, notable bird observations during other surveys were also recorded.

Bird surveys were conducted on a weekly basis throughout the period. A total of 54 bird species were recorded in the Survey Area (excluding the WRA) in the survey period (i.e. November 2018 to April 2019), 27 of which were species of conservation importance and/or wetland-dependence. A summary of survey data is provided in **Appendix B**.

A total of 57 species were recorded in the WRA in the survey period, 27 of which were species of conservation importance and/or wetland-dependent species. Two of the three target species¹ (i.e. Little Egret, *Egretta garzetta* and Chinese Pond Heron, *Ardeola bacchus*) were recorded in the WRA during regular survey. The WRA continues to attract a number of species of conservation importance, including Little Grebe, *Tachybaptus ruficollis*, Great Cormorant, *Phalacrocorax carbo*, Grey Heron, *Ardea cinerea*, Purple Heron, *Ardea purpurea*, Great Egret, *Ardea alba*, Yellow Bittern, *Ixobrychus sinensis*, Black-crowned Night Heron, *Nycticorax nycticorax*, Black Kite, *Milvus migrans*, Crested Serpent Eagle, *Spilornis cheela*, Black-winged Stilt, *Himantopus himantopus*, Common Greenshank, *Tringa nebularia*, Wood Sandpiper, *Tringa glareola*, Greater Painted-snipe, *Rostratula benghalensis*, White-throated Kingfisher, *Halcyon smyrnensis*, Pied Kingfisher, *Ceryle rudis*, Red-billed Starling, *Spodiopsar sericeus*, Collared Crow, *Corvus torquatus* and White-cheeked Starling, *Spodiopsar cineraceus*. Little Grebe, Yellow Bittern, Black-crowned Night Heron, Crested Serpent Eagle, Wood Sandpiper, Greater Painted-snipe, Pied Kingfisher, White-throated Kingfisher and Collared Crow are listed by Fellowes et al. as of “Local Concern” in 2002. Great Cormorant, Grey Heron, Great Egret and White-cheeked Starling are listed by Fellowes et al. “Potential Regional Concern” in 2002. Purple Heron, Black-winged Stilt, Common Greenshank and Black Kite are listed by Fellowes et al. as of “Regional Concern” in 2002. Collared Crow is also listed as “near threatened” species on the IUCN red list. Red-billed Starling is listed as Regional Concern (Wetland Restoration Plan, Mott, 2008).

In addition to wetland dependent birds, the WRA also attracts a number of terrestrial birds including Greater Coucal, *Centropus sinensis* which are listed as vulnerable (VU) in the China

¹ The target species are: Little Egret, *Egretta garzetta*, Eastern Cattle Egret, *Bubulcus coromandus* (formerly known as Cattle Egret, *Bubulcus ibis*) and Chinese Pond Heron, *Ardeola bacchus*.

Red Data Book and it is protected under terrestrial wildlife state protection (category II). Survey findings indicate that the WRA not only provides important habitat for wetland-dependence birds but also the terrestrial birds.

The fish ponds to the north of the WRA are at a greater distance from the residential portion and any disturbance impact(s) from the construction works would have first affected the WRA. Further, 27 bird species of conservation importance and /or wetland dependence, were observed using the site during survey period, including some bird species which are highly sensitive to disturbance and three target species (i.e. Little Egret, Eastern Cattle Egret and Chinese Pond Heron). Thus, the WRA is considered to be effective both in acting as a buffer against potential disturbance impacts from the construction site, and in providing suitable wetland habitats at the fringe of the Deep Bay system.

2.3 Monitoring of Herpetofauna

Monitoring was undertaken following the survey methodology in the EM&A Manual. Day-time herpetofauna surveys were conducted once a month between November 2018 and April 2019. Night-time herpetofauna surveys were conducted once a month between March 2019 and April 2019. No herpetofauna surveys were scheduled between December 2018 and February 2019. Further, notable herpetofauna observations during other surveys were also recorded.

Two amphibian and two reptile species were recorded in the survey area (excluding the WRA) within the survey period.

One amphibian species, Günther's Frog *Sylvirana guentheri* and no reptile species were recorded in the WRA within the survey period.

A summary of survey data is provided in **Appendix C**.

2.4 Monitoring of Dragonfly and Butterflies

Monitoring of dragonflies and butterflies was conducted once per month in November 2018 and March 2019, and twice per month in April 2019. No odonates and butterflies surveys were scheduled between December 2018 and February 2019. Further, notable dragonfly and butterfly observations during other surveys were recorded.

A total of 4 dragonfly species and 3 butterfly species were recorded using the ponds in the Survey Area (excluding WRA) in the reporting period. At the WRA, a higher diversity of dragonfly species (5 species) and butterfly species (7 species) were recorded. A summary of the survey findings is provided in **Appendix C**.

2.5 Monitoring of Mammals

Monitoring of mammals was conducted concurrently with other surveys. One mammal species was recorded in the Survey Area (excluding WRA) outside regular survey within the reporting period.

Two unidentified bat species were recorded within the WRA outside regular survey during the reporting period. A summary of the survey findings is provided in **Appendix C**.

2.6 Monitoring of Water Quality

Monthly water quality monitoring continued during the reporting period. In March 2019, the pH of Cell 3 reached action level; In December 2018, the water level of Cell 2 reached the action level. In January 2019, the water level of Cell 2 and Cell 3 reached the action level. In February

2019, the water level of Cell 1 and Cell 2 reached the action level. In March 2019, the water level of Cell 1, Cell 2 and Cell 4 reached the action level. In April 2019, the water level of Cell 2 reached the the action level.

According to the ecological monitoring data, the low water level in the WRA attracted wetland-dependent species including Little Grebe, Great Cormorant, Grey Heron, Purple Heron, Great Egret, Yellow Bittern, Black-crowned Night Heron, Black Kite, White-breasted Waterhen, Common Moorhen, Black-winged Stilt, Common Greenshank, Wood Sandpiper, Green Sandpiper, Greater Painted-snipe, Common Sandpiper, White-throated Kingfisher, Pied Kingfisher, Common Kingfisher, Eastern Yellow Wagtail, White Wagtail, Black-browed Reed Warbler, Red-billed Starling, Collared Crow and White-cheeked Starling. As the low water level attracts wetland-dependent birds, the existing water level will be maintained. Monitoring data is presented in **Appendix D**. Locations for the monitoring of water quality for the ecological monitoring are shown in **Figure 1.2**.

3 Ecological Issues

3.1 Vegetation Management

Removal of exotic vegetation in all cells was undertaken; these included but not limited to *Ipomoea* sp., *Mikania* sp., *Mimosa* sp., *Pennisetum* sp. and *Typha* sp..

Vegetation management activities undertaken at the site primarily involved watering of plants, weeding and grass cutting.

3.2 Wildlife Management

Golden Apple Snails were removed on an “as-seen” basis.

All red fire ant nests were treated with approved pesticide and covered with overturn baskets for a week. All pesticide used was in powder form and the pesticide usage was confined to Fire Ants’ nest found on terrestrial area which were further away from the Cells to prevent the contamination of water. All treated fire ant nests were inactive within one week of treatment.

Preliminary actions have been taken to increase the WRA utilization by birds. The mitigation actions are:

1. Lowering the water level of Cell 2, Cell 3 and Cell 4;
2. Controlling the vegetation at Cell 1, Cell 2, Cell 3 and Cell 4.

These mitigation actions aim to increase the foraging area and maintain suitable habitat for target species.

4 Summary of Wetland Restoration Area Performance

4.1 Summary of Findings

Ecological monitoring between 1 November 2018 and 30 April 2019 was carried out following the survey methodology and frequency outlined in the EM&A Manual.

Summary of ecological monitoring in the Survey Area and WRA between November 2018 and April 2019 (**Table 4.1**):

Table 4.1: Summary of Ecological Monitoring in WRA and Survey Area

Species	Number of species recorded in Survey Area (excluding WRA)	Number of species recorded in WRA
Birds (total)	54	57
Birds (of conservation importance and/or wetland-dependence)	27	27
Amphibians	2	1
Reptiles	2	0
Mammals	1	2
Dragonflies	4	5
Butterflies	3	7

A total of 57 bird species, 1 amphibian species, 2 mammal species, 5 dragonfly species and 7 butterfly species were recorded in the WRA, including 27 bird species of conservation importance and/or wetland-dependence, while all dragonfly species are wetland-dependent. These findings indicate that the WRA is supporting wetland-dependent birds and other species of conservation importance.

Survey findings indicate that the WRA is attracting two of the three target species (Little Egret and Chinese Pond Heron) to varying degrees. During the survey period (i.e. November 2018 and April 2019), the site was particularly attractive to Little Egret. Little Egret was recorded on nearly weekly basis, with monthly means ranging from 3.3 to 8.3 birds per survey; while Chinese Pond Heron was also recorded on nearly weekly basis in regular survey period (November 2018 and April 2019) with monthly means ranging from 1.4 to 4.5 bird per survey. Eastern Cattle Egret was least attracted to the site. No Eastern Cattle Egret was recorded in monthly survey during regular survey within the survey period. A list of the bird species recorded at the WRA since completion of site formation is provided in **Appendix B (Table B4 to B7)**.

With the completion of planting as scheduled in the approved Habitat Creation and Management Plan (HCMP) in August 2012, establishment work at the WRA is considered complete (except along the western and southern boundary where the planting is affected by the existing site boundary and noise barrier, and for which an approved Variation to Environmental Permit (EP-311/2008/D) to defer planting at the location applies), and the 30-month establishment period concluded in October 2012. A review of the performance of the WRA during the review period in terms of target species attraction is provided in Section 4.2 below.

It should be noted that the high planting density was intended to ensure a rapid establishment of the site prior to occupation intake, and not intended to be maintained as a long-term tree density at the WRA. It is a standard arboricultural practice to apply appropriate horticultural/ arboricultural maintenance methods in the subsequent five or six years after initial planting to remove less desired specimens to facilitate the successful growth of those which are of higher landscape and/or ecological value. Further, some fine tuning of planting locations and tree/shrub mix is required in order to fulfil the design intent of the habitat structure at WRA after reviewing the site configuration following site formation. Vegetation management hereafter should largely consist of maintenance of planted trees and shrubs for the creation of suitable habitats for target species and long-term habitat structure of the site.

4.2 WRA Performance for the Bird Target Species

The provision, maintenance and operation of a WRA are a requirement under the Environmental Permit for compensation for predicted ecological impacts to species of conservation importance. Three bird target species were identified during the EIA process; they are Little Egret, Eastern Cattle Egret and Chinese Pond Heron. Target levels of these species are the annual mean number recorded during the Baseline Ecological Monitoring (i.e. a mean of 5.5 Little Egret, 1.3 Eastern Cattle Egret and 1.3 Chinese Pond Heron over a 12-month period) thus, the ecological impact of the project to the species concerned is considered to have been fully compensated when the target level for each of the three species is achieved. Whilst further discussion and agreement regarding the target level is yet to be undertaken with the relevant Government departments prior to the operation of the WRA, the proposed level offers a clear reference to the effectiveness of the mitigation measures. According to the approved Wetland Creation and Restoration Scheme (November 2009, hereafter WCRS), the WRA is anticipated to be fully operational after an establishment period of 2.5 years (30 months).

Of the three target species, two of them (i.e. Little Egret and Chinese Pond Heron) were recorded using the site under survey period (November 2018 to April 2019). Among all target species, Little Egret and Chinese Pond Heron were recorded in all six months during the regular survey.

Table 4.2: Biannual mean & Annual mean of the three target species of the WRA from November 2017 to April 2019

Common Name	Scientific Name	Conservation Status ⁽²⁾	Baseline Annual Mean ⁽³⁾	Biannual Mean		Annual Mean		
				Nov 17 - Apr 18	May 18 - Oct 18	Nov 18 - Apr 19	May 17 - Apr 18	May 18 - Apr 19
Chinese Pond Heron	<i>Ardeola bacchus</i>	PRC, (RC)	1.3	2.4	1.9	2.6	2.4	2.2
Little Egret	<i>Egretta garzetta</i>	PRC, (RC)	5.5	15.7	3.6	5.9	11.1	4.8
Eastern Cattle Egret	<i>Bubulcus coromandus</i>	(LC)	1.3	<0.1	<0.1	0.0	<0.1	<0.1

Notes:

- (1) Value in **bold** indicated the Target Level was achieved.
- (2) Conservation Status follows that of Fellow *et. al.* (2002). See Appendix B (Table B3).
- (3) Annual mean number recorded during Baseline Ecological Monitoring.

Based on **Table 4.2** above, the target annual mean level of the Chinese Pond Heron have been achieved between May 2018 to April 2019 while the target levels for Little Egret and Eastern Cattle Egret have not been achieved.

As the Proposed Comprehensive Development at Wo Shang Wai is still under construction phase, it is considered acceptable for the target species levels have not been achieved. According to the ecological monitoring data of the Survey Area (excluding the WRA), Eastern Cattle Egret was observed only in 3 out of 25 regular surveys and 3 out of 16 outside surveys and the biannual mean of the Eastern Cattle Egret of survey area (excluding the WRA) is 0.3 bird per survey (Nov 2018 – Apr 2019), the results indicated that the number of Eastern Cattle Egret in the whole area is low and the low number of Eastern Cattle Egret in the WRA is considered acceptable. However, should this situation continue, a review of the management of the WRA and adaptive management steps will be required.

The mitigation actions including: 1) Lowering the water level; and 2) Controlling the vegetation; have been taken in the WRA since November 2014 to increase the WRA utilization by birds, especially for the three target species of the WRA. Since the implementation of the mitigation actions, the annual means of Chinese Pond Heron and Little Egret, two of the three target species reached the target level. This may indicate the mitigation actions taken in the WRA are effective. The mitigation actions will be continued in the WRA and monitoring will be continued to investigate the effectiveness of the mitigation actions.

In addition, though the target levels for Eastern Cattle Egret have not been achieved between November 2018 to April 2019, the WRA continues to attract wetland dependent species. Among all the wetland dependent species, Little Grebe, Yellow Bittern, Black-crowned Night Heron, Crested Serpent Eagle, Wood Sandpiper, Greater Painted-snipe, Pied Kingfisher, White-throated Kingfisher and Collared Crow are listed by Fellowes et al. as of “Local Concern” in 2002. Great Cormorant, Grey Heron, Great Egret and White-cheeked Starling are listed by Fellowes et al. “Potential Regional Concern” in 2002. Purple Heron, Black-winged Stilt, Common Greenshank and Black Kite are listed by Fellowes et al. as of “Regional Concern” in 2002. Collared Crow is also listed as “near threatened” species on the IUCN red list. Red-billed Starling is listed as Regional Concern (Wetland Restoration Plan, Mott, 2008).

A summary of the annual mean of bird species of conservation importance and/or wetland-dependence recorded in the WRA from November 2018 to April 2019 is shown in **Table 4.3**.

The increase of the number of the species of conservation interest indicates the WRA is providing suitable habitat for them.

Table 4.3: Mean number of bird species of conservation importance and/or wetland-dependence in the WRA during reporting period

Common Name	Scientific Name (3)	Wetland Dependence	Conservation Status (1)	Annual mean number recorded during the Baseline Ecological Monitoring	Mean number recorded between Nov 2018 - Apr 2019 (2)
Little Grebe	<i>Tachybaptus ruficollis</i>	Y	LC	0.0	2.2

Zitting Cisticola	<i>Cisticola juncidis</i>	Y	LC	0.1	0.0

Notes:

(1) Conservation status follows that of Fellowes *et al.* (2002) and BirdLife International listing (2017). Letters in parentheses indicate that the assessment is on the basis of restrictedness in breeding and/or roosting sites rather than in general occurrence. (Fellowes *et al.* 2002)

(2) Refers to the mean number of individuals recorded between May 2018 – Oct 2018 in the WRA

(3) Follows HK bird list (dated 2017-09-05)

V indicates the species is recorded outside regular surveys

- indicates the species is not recorded during the survey

* Red-billed Starling is considered by Fellows *et al* (2002) to be of Global Concern. Since publication, however, the global population estimate has been revised and the species is not now considered globally threatened. A listing of Regional Concern (RC) based on the importance of the large roosts present near Deep Bay, is considered to be more appropriate. (Wetland Restoration Plan, Mott, 2008). Red-billed Starling is now listed as Least Concern by IUCN. (IUCN, 2016)

4.3 Conclusions

A total of 136 bird species have been recorded within the WRA since completion of site formation. Of the 136 species, 84 were species of conservation importance and/or wetland dependence – indicating that the WRA provides suitable habitats for these species despite the construction work within the residential portion of the Project Site.

The site is also considered achieving the no net loss of wetland in terms of area and function because it continuously attracts bird species of conservation importance, indicating that the WRA not only provides a buffer for potential disturbance during construction phase, but also a valuable habitat for wetland dependent species and species of conservation importance.

White Wagtail	<i>Motacilla alba</i>	Y	-	3.3	2.8	5.5	2.8	2.2	1.8
Red-billed Starling	<i>Spodiopsar sericeus</i>	Y	(RC)*	0.0	0.0	0.3	0.0	V	1.3
White-shouldered Starling	<i>Sturnia sinensis</i>	Y	(LC)	0.0	0.0	0.0	0.3	0.0	0.3
Collared Crow	<i>Corvus torquatus</i>	Y	LC, NT	0.0	0.5	0.3	0.3	0.2	0.0
No. of Species Recorded				21	18	20	20	16	16

(1) Conservation status follows that of Fellowes *et al.* (2002) and BirdLife International listing (2017). Letters in parentheses indicate that the assessment is on the basis of restrictedness in breeding and for roosting sites rather than in general occurrence. (Fellowes *et al.* 2002)

(2) Refers to the mean number of individuals recorded in each survey in the Survey Area (excluding the WRA)

(3) Follows HK bird list (dated 2017-09-05)

V indicates the species is recorded outside regular surveys

* Red-billed Starling is considered by Fellowes *et al.* (2002) to be of Global Concern. Since publication, however, the global population estimate has been revised and the species is not now considered globally threatened. A listing of Regional Concern (RC) based on the importance of the large roosts present near Deep Bay, is considered to be more appropriate. (Wetland Restoration Plan, Mott, 2008). Red-billed Starling is now listed as Least Concern by IUCN. (IUCN, 2016)

Table B2: Summary of bird monitoring (for species of conservation importance and/or wetland-dependence) in the WRA

Common Name	Scientific Name (3)	Wetland Dependent	Conservation Status (1)	Nov 2018 Mean (2)	Dec 2018 Mean (2)	Jan 2019 Mean (2)	Feb 2019 Mean (2)	Mar 2019 Mean (2)	Apr 2019 Mean (2)

No. of Species Recorded				15	22	19	19	18	18

(1) Conservation status follows that of Fellows et al. (2002) and BirdLife international listing (2017). Letters in parentheses indicate that the assessment is on the basis of restrictedness in breeding and for roosting sites rather than in general occurrence. (Fellows et al. 2002).

(2) Refers to mean number of individuals recorded in each survey in the Survey Area (excluding the WRA).

(3) Follows HK bird list (dated 2017-09-05).

V indicates the species is recorded outside regular surveys

* Red-billed Starling is considered by Fellows *et al* (2002) to be of Global Concern. Since publication, however, the global population estimate has been revised and the species is not now considered globally threatened. A listing of Regional Concern (RC) based on the importance of the large roosts present near Deep Bay, is considered to be more appropriate. (Wetland Restoration Plan, Mott, 2008). Red-billed Starling is now listed as Least Concern by IUCN. (IUCN, 2016)

Table B3: Conservation Status Categories of Bird Species

Code	Category	Brief Description	Source
GC	Global Concern	Habitat loss/ damage in Hong Kong would pose significant threat to global survival.	Fellowes <i>et al.</i> (2002)
RC	Regional Concern	Habitat loss/ damage in Hong Kong would pose significant threat to regional survival.	
LC	Local Concern	Habitat loss/ damage in Hong Kong would pose significant threat to local survival.	
PGC	Potential Global Concern	Large, secure population in Hong Kong is of global significance.	
PRC	Potential Regional Concern	Large, secure population in Hong Kong is of regional significance.	
CR	Critically Endangered	Best available evidence indicates that it meets any of the criteria A to E for Critically Endangered, and it is therefore considered to be facing an extremely high risk of extinction in the wild.	BirdLife International (2017)
EN	Endangered	Best available evidence indicates that it meets any of the criteria A to E for Endangered, and it is therefore considered to be facing a high risk of extinction in the wild.	
VU	Vulnerable	Best available evidence indicates that it meets any of the criteria A to E for Vulnerable, and it is therefore considered to be facing a high risk of extinction in the wild.	
NT	Near Threatened	Does not qualify for Critically Endangered or Vulnerable now, but is close to qualifying for or is likely to qualify for a threatened category in the near future.	

Table B4: Summary of Bird Species Recorded at WRA and their Respective Monthly Mean between September 2010 and October 2012

Note: Conservation Status follows that of Fellows et. al. (2002)

^ Pintail Snipe and Swinhoe's Snipe cannot be distinguished in field, conservation status refers to Swinhoe's Snipe.

V Indicates the species is recorded outside regular surveys.

DS Indicates species recorded during survey.

Greater Coucal is listed as vulnerable (VU) in China Red Data Book and it is protected terrestrial wildlife state protection (category II).

* Red-billed Starling is considered by Fellows et al (2002) to be of Global Concern. Since publication, however, the global population estimate has been revised and the species is not now considered globally threatened. A listing of Regional Concern (RC) based on the importance of the large roosts present near Deep Bay, is considered to be more appropriate. (Wetland Restoration Plan, Mott, 2008). Red-billed Starling is now listed as Least Concern by IUCN. (IUCN, 2016)

Notes: Conservation Status follows that of Fellows et. al. (2002)

^ Pintail Snip and Swinhoe's Snipe cannot be distinguished in field, conservation status refers to Swinhoe's Snipe.

V Indicates the species is recorded outside regular surveys.

DS Indicates species recorded during survey.

Greater Coucal is listed as vulnerable (VU) in China Red Data Book and it is protected terrestrial wildlife state protection (category II).

* Red-billed Starling is considered by Fellows et al (2002) to be of Global Concern. Since publication, however, the global population estimate has been revised and the species is not now considered globally threatened. A listing of Regional Concern (RC) based on the importance of the large roosts present near Deep Bay, is considered to be more appropriate.

(Wetland Restoration Plan, Mott, 2008). Red-billed Starling is now listed as Least Concern by IUCN. (IUCN, 2016)

- (1) Conservation Status follows that of Fellowes et. al. (2002). Letters in parentheses indicate that the assessment is on the basis of restrictedness in breeding and/or roosting sites rather than in general occurrence. (Fellowes et al. 2002)
^Pintail Snipe and Swinhoe's Snipe cannot be distinguished in field, conservation status refers to Swinhoe's Snipe
V indicates the species is recorded outside regular surveys
DS indicates species recorded during surveys
Greater Coucal is listed as vulnerable (VU) in China Red Data Book and it is protected under terrestrial wildlife state protection (category II).
* Red-billed Starling is considered by Fellowes *et al* (2002) to be of Global Concern. Since publication, however, the global population estimate has been revised and the species is not now considered globally threatened. A listing of Regional Concern (RC) based on the importance of the large roosts present near Deep Bay, is considered to be more appropriate. (Wetland Restoration Plan, Mott, 2008). Red-billed Starling is now listed as Least Concern by IUCN. (IUCN, 2016)

Note: Conservation Status follows that of Fellows et. al. (2002) Letters in parentheses indicate that the assessment is on the basis of restrictedness in breeding and/or roosting sites rather than in general occurrence. (Fellows et al. 2002)

^ Pintail Snip and Swinhoe's Snipe cannot be distinguished in field, conservation status refers to Swinhoe's Snipe.

V Indicates the species is recorded outside regular surveys.

DS Indicates species recorded during survey.

Greater Coucal is listed as vulnerable (VU) in China Red Data Book and it is protected terrestrial wildlife state protection (category II).

* Red-billed Starling is considered by Fellows et al (2002) to be of Global Concern. Since publication, however, the global population estimate has been revised and the species is not now considered globally threatened. A listing of Regional Concern (RC) based on the importance of the large roosts present near Deep Bay, is considered to be more appropriate. (Wetland Restoration Plan, Mott, 2008). Red-billed Starling is now listed as Least Concern by IUCN. (IUCN, 2016)

Note: Conservation Status follows that of Fellows et. al. (2002) Letters in parentheses indicate that the assessment is on the basis of restrictedness in breeding and/or roosting sites rather than in general occurrence. (Fellows et al. 2002)

^ Pintail Snip and Swinhoe's Snipe cannot be distinguished in field, conservation status refers to Swinhoe's Snipe.

V Indicates the species is recorded outside regular surveys.

DS Indicates species recorded during survey.

Greater Coucal is listed as vulnerable (VU) in China Red Data Book and it is protected terrestrial wildlife state protection (category II).

* Red-billed Starling is considered by Fellows et al (2002) to be of Global Concern. Since publication, however, the global population estimate has been revised and the species is not now considered globally threatened. A listing of Regional Concern (RC) based on the importance of the large roosts present near Deep Bay, is considered to be more appropriate. (Wetland Restoration Plan, Mott, 2008). Red-billed Starling is now listed as Least Concern by IUCN. (IUCN, 2016)

Appendix C. Summary of Herpetofauna Monitoring, Mammals and Insect Surveys

Table C1: Summary of herpetofauna monitoring within the Survey Area (excluding the WRA)

Common Name	Scientific Name	Conservation Status(1)	Mean(2)		
Amphibians			Nov 2018	Mar 2019	Apr 2019
Asian Common Toad	<i>Duttaphrynus melanostictus</i>	-	0.0	3.0	0.0
Günther's Frog	<i>Sylvirana guentheri</i>	-	0.0	0.0	0.5
No. of Species Recorded			0	1	1
Reptiles			Nov 2018	Mar 2019	Apr 2019
Common Rat Snake	<i>Ptyas mucosus</i>	-	0.0	0.0	0.5
Red-eared Slider	<i>Trachemys scripta elegans</i>	-	V	0.0	0.0
No. of Species Recorded			1	0	1

(1) Conservation status follows that of Fellows that of Fellowes et al. (2002), Chan et al. (2005) and Karsen et al. (1998).

(2) Refers to the mean number of individuals recorded in the reporting period (excluding the WRA)

V Indicates the species is recorded outside regular surveys.

Table C2: Summary of herpetofauna monitoring in the WRA

Common Name	Scientific Name	Conservation Status	Mean (2)		
Amphibians			Nov 2018	Mar 2019	Apr 2019
Günther's Frog	<i>Sylvirana guentheri</i>	-	0.0	1	1
No. of Species Recorded			0	1	1
Reptiles			Nov 2018	Mar 2019	Apr 2019
No Reptile species was recorded within the reporting period					
No. of Species Recorded			0	0	0

- (1) Conservation status follows that of Fellows that of Fellowes et al. (2002), Chan et al. (2005) and Karsen et al. (1998).
 (2) Refers to the mean number of individuals recorded in the reporting period at WRA.
 V Indicates the species is recorded outside regular surveys.

Table C3: Summary of mammal monitoring in the Survey Area (excluding the WRA)

Common Name	Scientific Name	Conservation Status (1)	Max (2)					
Mammal			Nov 2018	Dec 2018	Jan 2019	Feb 2019	Mar 2019	Apr 2019
Bat	<i>indet. sp.</i>	-	0	0	0	0	V	0
No. of Species Recorded			0	0	0	0	1	0

- (1) Conservation status follows that of Fellows et al. (2002) and Shek (2006).
 (2) Refers to the maximum number of individuals recorded in each month in the survey area (excluding WRA).
 V Indicates the species is recorded outside regular surveys.

Table C4: Summary of mammal monitoring in the WRA

Common Name	Scientific Name	Conservation Status (1)	Max (2)					
Mammal			Nov 2018	Dec 2018	Jan 2019	Feb 2019	Mar 2019	Apr 2019
Bat	<i>indet. sp. 1</i>	-	0	V	0	V	V	0
Bat	<i>indet. sp. 2</i>	-	0	V	0	V	V	0
No. of Species Recorded			0	2	0	2	2	0

(1) Conservation status follows that of Fellows et al. (2002) and Shek (2006).

(2) Refers to the maximum number of individuals recorded in each month at WRA.

V Indicates the species is recorded outside regular surveys.

(3) #Leopard Cat is listed on CITES Appendix II and vulnerable (VU) in China Red Data Book and it is protected under the Wild Animals Protection Ordinance (Cap. 170)

Table C5: Summary of dragonfly and butterfly monitoring in the Survey Area (excluding the WRA)

Common Name	Scientific Name	Conservation Status(1)	Mean(2)
